	Title:	Deploying a locked down approved operating system for an end user
	Description:	Build a user's laptop using the PXE boot technology from the local PXE boot server other ethernet using the local NiC option
	Evidence:	
	Research the key required to choose boot device	
Installing an operating system	Boot the laptop	
Booting a laptop from NiC	Press the key (usually f12 or delete)	
Protecting data by wiping it before deploying	Choose either PXE boot or local NiC	
Communication with end users to ensure the software they need is installed	Press f12 once the device has received an IP from the DHCP server	
	Enter the password to authenticate secure boot	
	Follow the windows setup as you would normally	
	Write up	To wipe any data on the device previously we have rebuild the device this ensures a fresh install also ensuring it has the latest approved upgrades
